Subject: Re: FW: Appendices, CAD Cell Report, New Bedford Modeling Update

Bob - I like your thinking, supporting lab data but no code or model output. But it would also make sense for Paul to archive all the model output, etc. just for safe keeping and in case its needed in the future.

Dave

Dave - Paul is asking what you would like or expect to see in the CAD cell Modeling report appendices. Personally, I use appendices as a reference when I'm reading the report and am unlikely to refer to the modeling code or output files. I would refer to the lab data. This report will be the only place all that data will be in one place.

So, my suggestion would be to include all the supporting data minus any modeling output.

I'll be out of the office this Friday. Would you like to talk to Paul about this?

Tx

Bob

We will put it together but we have questions as to how info should be included. Can we have a call with Dave on Friday? Most feasibility reports that I have seen are somewhat limited in the modeling details but we would like to provide whatever is needed.

Paul

Paul - Can you send me the appendices on CD? Dave has asked for them.
